Functions

Entrance

Pushing and turning inside button locks outside lever requiring use of key until button is manually unlocked. Pushing inside button locks outside lever until unlocked with a key or inside lever is turned. Inside lever always retracts latch.

Single Cylinder

Deadbolt is locked and unlocked by a thumbturn inside and a key outside. Knob lock is locked or unlocked by a turn piece inside and a key outside.

Double Cylinder*

Deadbolt is locked and unlocked by a key inside and outside. Knob lock is locked or unlocked by a turn piece inside and a key outside.

* Deadbolts that secure both sides of the door are controlled by building codes and the Life Safety Code. In an emergency exit situation, failure to quickly unlock the inside knob could be hazardous or even fatal.
